Summary:

Data Analyst at BMO with acumen in regulatory reporting and liquidity risk management, specializing in FR 2052a. Proficient in Python, SAS, and SQL for validating, transforming, and optimizing large-scale liquidity datasets across inflows, outflows, and collateral schedules. Deliver high-quality regulatory data, strengthens data governance, and provides actionable analytics to support enterprise risk management and regulatory compliance.

Professional Experience:

Data Analyst – Regulatory Reporting (FR 2052a) **September 2025 – Present**

BMO Financial Group, Chicago

- Strengthen LCR and NSFR reporting across products and sources by analyzing data gaps, enhancing source-to-target mappings, and improving transformations and validations, increasing data accuracy, consistency, and liquidity insights for Treasury and Liquidity Risk teams.
- Design and optimize data engineering workflows, integrating upstream systems and transforming them into FR 2052a 6G compliant reported variables to enable timely consolidated liquidity submissions.
- Improve reporting performance and stability by migrating and refactoring legacy workflows to 6G, resolving data quality and reconciliation issues, and optimizing ETL design to reduce runtime and reinforce liquidity reporting governance.

Data Analyst Intern - Insights & Decision Intelligence **June 2025 – August 2025**

Global Digital Next, Chicago

- Delivered actionable business insights by cleaning and analyzing datasets with SQL and Python, learning to diagnose business problems and design effective solutions, and building Power BI dashboards to track KPIs and support data-driven decisions across products and operations.

Data Analyst Intern - Risk Data and Technology Infrastructure (ERPM) **January 2025 – May 2025**

BMO Financial Group, Chicago

- Optimized large-scale risk data pipelines and reporting workflows by aggregating 200M+ records into 39 API calls, reducing RWA retrieval from 65 hours to minutes, and delivered SQL-driven Power BI dashboards for KRIs, RWA, and capital ratios to enhance decision-making.
- Built a reusable PySpark anomaly detection platform on AWS SageMaker using Random Cut Forest to process 35M+ Parquet records, enhancing retail credit-risk expertise through MoM STND RWA decomposition for 13M+ records, improving regulatory transparency and recovery planning.

Programmer Analyst - Walmart Mexico Ecommerce Project **March 2021 – July 2023**

Cognizant Technology Solutions, Bengaluru

- Analyzed ETL pipelines and big data (inventory/pricing) for Walmart Mexico and resolved 750+ tickets using SQL, Splunk, and Kafka Lenses, improving data flow integrity and operational performance, supporting high-impact sales events that boosted revenue by 7%.

Skills:

Languages & Tools: Python, Polars, Axiom CV10, PySpark, SQL, SAS, Pandas, Power BI, AWS, Microsoft Azure, Pentaho ETL, Grafana, Manta

Key Competencies: Liquidity Risk Management, Regulatory Reporting, ETL Pipeline Design & Optimization, Data Quality & Governance, Data Analytics, Financial Data Modeling, Data Engineering, Data Visualization, Problem Solving, Critical Thinking, Communication

Certifications: Data Analyst in Power BI, Liquidity Risk Management, Risk Management Specialization

Education:

Illinois Institute of Technology, Chicago, IL, Masters in Information Technology and Management, Data Analytics **August 2023 – May 2025**

Projects:

End-to-End Azure Data Engineering with PySpark for Supermarket Sales Data: **August 2024 – December 2024**

- Developed an end-to-end Azure pipeline that ingested on-premises SQL data via Azure Data Factory, transformed it through bronze, silver, and gold layers in Azure Databricks using PySpark, and stored the cleaned data in Azure Synapse Analytics.
- Designed a real-time Power BI Sales Dashboard with schedulers, leveraging Azure AD and Key Vault to enhance visualization and security.

Credit Score Classification and Association Rule Mining in Python: **April 2024 – May 2024**

- Cleaned and preprocessed 100k customer credit scores and applied oversampling to address class imbalance, improving ML model performance to 82% accuracy and 95.6% AUC, while uncovering key customer patterns using Apriori association rules with 50% average confidence.

Ingesting And Building LinkedIn Data Marts (ETL): **April 2024 – May 2024**

- Constructed an ETL pipeline with 10+ transformations to extract, model, and parsed LinkedIn profile data and images from JSON APIs and SQL tables ensuring normalization and integrity and imported the data into Tableau to create 10+ dashboards for LinkedIn data marts.

Leadership and Honors:

- Headed a 15-member marketing team to raise \$880 (INR ₹75,000), for the university fest, networking with business personalities.
- Received best performer award for maintaining a robust 90% SLA for operational continuity and client satisfaction.
- Emphasized musical journey by leading cultural clubs of SASTRA to encourage active participation in over 5+ events
